

DECORATIVE CONCRETE FINISH OPTIONS

Spun Concrete Poles

The concrete décor colors add warmth and vitality to an already attractive product. Available in a wide selection of colors from earth tones to delicate pastels that beautify and harmonize any lighting project. Composed of natural stone and a solid colored matrix, the color permeates throughout the entire pole requiring zero maintenance rather than being merely a surface treatment. Available in an etched or polished surface, with optional pole finishes as outlined below.

Optional Concrete Pole Finishes for Decorative Poles

Natural Finish:

All of our decorative concrete poles are available with a naturally beautiful exposed aggregate finish without acrylic. Although all StressCrete poles (coated and uncoated) have a lifetime warranty, we also offer the below three coating systems that the customer may choose for aesthetics or for additional peace of mind.

Silane Water Repellant Seal:

A high performing and efficient sealer which deeply penetrates into the concrete due to its small molecular structure. In extreme weather conditions, it assists in preventing the intrusion of water, salts, de-icer chemicals and acids. Having a natural appearance, it does not darken or effect the otherwise natural color and appearance of the concrete and does not produce surface buildup.

Acrylic Clear Coat:

A high performing, two component sacrificial Acrylic Urethane coating which provides durability, plus resistance to chemicals, salt, and de-icers. Along with concrete protective properties, it also provides a glossy finish which enhances the concrete's natural colors. Although this product has excellent gloss retention, like any coating, it will fade gracefully over time. Depending on environmental conditions, the gloss of this product will last at least 5 to 15 years however if a glossy finish is preferred over the life span of the pole, the coating can be reapplied.

Anti-Graffiti Coat:

A unique, protective, non-sacrificial coating that provides an effective, easily cleaned anti-graffiti surface in a high gloss finish. It has excellent gloss retention and is both abrasion and impact resistant withstanding multiple cleanings. Its high performance properties combat common graffiti materials such as spray paint and markers that can be easily removed using a solvent cleaner. With its outstanding weatherability, our anti-graffiti coating will maintain its gloss and color retention for years.
